

Learn how patients can be helped through Low Vision Rehabilitation & Neuro-Optometry

Many patients can make the most of their vision with unique prescriptions and training.

You are invited to join us for an exclusive workshop to learn about the unique area of functional vision care dedicated to patients with vision loss or changes due to eye disease, stroke, and traumatic brain injury.

At this 90 minute workshop Dr. John Metzger, an optometrist specially trained in vision rehabilitation and neuro-optometry, and Terri Haynes, a certified low vision therapist, will discuss the most effective ways to evaluate and treat patients in need of vision rehabilitation, as well as provide an overview of symptoms and how to refer for care.

KANSAS CITY
VISION PERFORMANCE CENTER

Workshop

LV Rehab & Neuro-Optometry

This participant-driven discussion will cover:

- Why low vision rehab and neuro-optometry are different from general care optometry and ophthalmology.
- How and when vision rehab fits into the scope of patient care.
- Evaluations and types of special prescriptions, devices, and training available to patients.
- How to assess and educate patients.
- Effective ways to develop interdisciplinary team strategies to achieve the best patient outcomes.
